Protecting coral

The Great Barrier Reef and its island national parks are home to abundant and diverse marine life, attracting thousands of visitors each year. Corals are among the most popular attractions, yet they are the most vulnerable.

Coral reefs can be damaged by:
• a vessel’s anchor and chain dropping or dragging on coral
• a vessel grounding when the wind changes or the tide ebbs
• a chain or rope wrapping around coral and breaking pieces off.

It may take many years for coral to recover. Some coral never returns to its original condition.

It is an offence to damage coral in the Great Barrier Reef and Great Barrier Reef Coast marine parks.

Public moorings and anchoring

Protecting coral in the Townsville–Hinchinbrook area

Anchor chains damage coral.

Public moorings

Public moorings are blue, double-cone shaped buoys with a colour-coded band. The band indicates one of five classes of moorings found throughout the marine park that cater to different vessel types and lengths.

The mooring specifications and conditions of use are displayed on the colour-coded band and on the mooring tag attached to the pick-up line. A large number of privately owned moorings also exist within the marine park. You should obtain the permission of the owner before using a privately owned mooring.

Use of moorings

- All public moorings are available for overnight use.
- All public moorings have a time access limit on day use. A vessel cannot occupy a mooring for longer than the time limit specified on the mooring tag, between the hours of 7am and 5pm. Most moorings have a two or four hour limit. This ensures fair and equitable use of the moorings. If a vessel picks up a mooring on or after 3pm it may remain until 9am the next day.
- Public moorings must not be used by more than one craft at a time (ancillary craft exempted), unless otherwise stated.
- Take care to comply with all information displayed on the mooring tag.
- It is an offence to remove, misuse, or engage in conduct that results in damage to a public mooring.

How to pick up a mooring

- Take note of the prevailing wind and tides. Approach the mooring buoy by motoring into the wind or tide (whichever is stronger).
- Observe the colour-coded band on the buoy to ensure your vessel is within the size and wind strength limitations for the mooring.
- Take care to avoid running over the pick-up line when approaching the mooring.
- Using a boat hook, retrieve the pick-up line.
- Observe the mooring tag attached to the pick-up line for information on the limits of use.
- Attach the mooring eye to a cleat or strong point on the bow of the vessel. No other lines should be used when mooring as this may increase the swing circle and lead to vessel or reef damage.

How to drop a mooring

- Motor slowly towards the mooring to slacken the line slightly.
- Cast the mooring line and pick-up line well clear of the vessel.
- Reverse away from the mooring buoy and lines.

Public moorings are generally located near drying reefs or shorelines. Care should be taken when approaching and departing the buoys. Particular care should be taken in accessing the moorings in poor weather, reduced visibility or at night.
Reef protection markers

The Townsville–Hinchinbrook area contains many well-developed fringing reefs that support highly-diverse coral communities.

To protect these reefs, no-anchoring areas can be found at the following locations:

- Picnic and Florence bays, Magnetic Island
- Pioneer Bay and Yanks Jetty, Orpheus Island
- Brook Islands
- The Haven, Hinchinbrook Island (for cultural significance).

Reef protection markers have been installed to mark the no-anchoring area. They are easily identified by their white, pyramid-shaped buoys (joined with an imaginary line).

Never anchor inshore of the buoys except when anchoring on, or adjacent to beach areas. Reef protection markers must not be used to moor vessels.

Anchor with care outside reef protection markers

Please ensure you follow best environmental practices when anchoring.

- Carry enough chain, or chain and line, for the water depth.
- Anchor in sand or mud away from corals.
- Motor towards the anchor while retrieving it. If the anchor is stuck, motor the vessel above and slightly ahead of the anchor before retrieval.
- Anchor far enough outside the line of reef protection markers to ensure that all parts of the anchor chain and rope remain outside the line of markers should the vessel swing.

Pioneer Bay, Orpheus Island

Pioneer Bay is a Marine National Park (Green) Zone and is a no-take area.

The Haven, Hinchinbrook Island

The Haven, Hinchinbrook Island is a no-anchoring area to protect cultural sites.

Yanks Jetty, Orpheus Island

Yanks Jetty is a Conservation Park (Yellow) Zone and limited fishing applies. Fishing is not permitted around the jetty.

Disclaimer: The above published positions are correct to the best of the Department of Environment and Resource Management’s (DERM) knowledge at May 2009. However no guarantee is given that the moorings are in the location shown. Vessel skippers should verify the mooring positions with their own GPS equipment prior to attempting to access the moorings. Particular care should be taken in accessing the moorings in poor weather, reduced visibility or at night.
Picnic Bay, Magnetic Island
Picnic Bay is a Conservation Park (Yellow) Zone and limited fishing applies.

Florence Bay, Magnetic Island
Florence Bay is a Marine National Park (Green) Zone and is a no-take area.

Brook Islands
The Brook Islands are a Marine National Park (Green) Zone and are a no-take area.
